

See how we measure up

The One Piece Wall System is a One Size Fits All solution for jobs that are always different.

See how Deluxe Bath is different:

ONE PIECE WALL SYSTEM	DELUXE BATH SYSTEM
Standard non-custom one piece material.	Custom cut and scribed to fit your bathroom.
Large material difficult to get into home and around corners.	Individual panels get into home easily.
Difficult installation for typical technicians.	Easy to install and create a perfect fit even for out of plumb walls.
Wall system does not go floor to ceiling, creating more seams.	Our systems go from the floor to the ceiling making for a better water seal and a more finished look with a bullnose edge.
If plumbing problems arise, the entire system must be removed to gain access to plumbing.	Plumbing wall panel can be removed and replaced should plumbing problems occur.
No corner joint does not allow for thermal expansion, which leads to stress and cracking in the corners.	Corner seams are designed for thermal expansion and watertight with triple lock seals.
Thinner material rolls like carpet.	Our material is thicker, stronger and more durable.
Angled walls and ceilings cannot use the One Piece Wall System.	Custom cut panels can cover almost any angled or sloped ceiling or wall.
Tub liners are thinner and are created from fiberglass molds of a mold, which allows air gaps.	Ours are created from an actual cast mold of your tub, ensuring a perfect fit.
Their wall system creates hollow pockets when they try to fit a one piece into a square opening.	Our walls systems are custom cut and scribed to ensure a perfect fit to your walls, even for out of plumb walls.
